This video is a step-by-step process on how to activate and use 7.1 Surround Sound.

With 7.1 Surround Sound, you can have superior positional audio and a lifelike gaming experience.

To install 7.1 Surround Sound, you need the following:

Windows 10 64-bit operating system

Internet connection for initial Razer ID login and activation

Let's get started.

Download and install 7.1 Surround Sound software.

You can get the 7.1 Surround Sound software via the link in the description.

Run the 7.1 Surround Sound installer, and then click "INSTALL." This may take a few minutes to complete.

After completing the installation, launch the 7.1 Surround Sound app then log in with your Razer ID.

Enter the activation code that came with your headset purchase.

Check out the description for the list of headsets that come with an activation code upon purchase.

In order for 7.1 Surround Sound to take effect, it has to be selected as the system's default playback device.

Go to Settings > System > Sound then select "Speakers (7.1 Surround Sound)" as the output device.

Launch the 7.1 Surround Sound software and select the output device that you would like to apply 7.1 Surround Sound on.

If you are using an analog headset connected via the system's 3.5 mm port, ensure to select the system's onboard audio playback device, for example, Realtek High Definition Audio and so on.

For best results, ensure that "Spatial sound" is turned off in the Windows sound settings.

Go to Settings > System > Sound then select "Sound Control Panel" under "Related Settings."

Right-click on the playback device where the 7.1 Surround Sound is active, then select "Properties."

Go to the "Spatial sound" tab then check if "Off" is selected from the drop-down list under the "Spatial sound format" section.

Click "Apply" then "OK."

Congratulations! You can now enjoy immersive gaming audio experience with 7.1 Surround Sound.
