

This video is a step-by-step process on how to replace the Back Paddles of the Razer Raiju V3 Pro.

The Razer Raiju V3 Pro has four removable Mouse Click Back Paddles that you can use as multi-function buttons.

If you want to change the back button configuration on the Razer Raiju V3 Pro you will need to physically swap out the back buttons using the included screwdriver and replacement covers.

To do this, follow these steps.

First, carefully pry apart the rubber cover. Then, using the included screwdriver, carefully remove the screws securing the back buttons.

While unscrewing it, maintain light pressure on the button. This will make the removal easier.

Detach the existing back buttons from the controller.

You can then replace them with the replacement cover included in the box.

These covers offer a smoother alternative for users who prefer not to use the back paddles, enhancing overall grip comfort. Note that the replacement cover is not a functional button.

Secure the replacement cover by screwing it back in carefully.

Remember to tighten the screw firmly, but not excessively. Over-tightening may cause the screw to break, while insufficient tightening could prevent it from functioning properly.

That's it! You've successfully replaced the Back Paddles on your Razer Raiju V3 Pro.
